FIG. 8

FIG. 9 is a perspective view of the device 100 in a closed position. The device 100 includes a first member 106 and a second member 118. The first member 106 is a flexible, elongated, and curved structure. The second member 118 is a rigid, elongated, and curved structure. The first member 106 is connected to the second member 118 at one end. The device 100 is shown in a closed position, where the first member 106 is folded over the second member 118. The device 100 is shown in a perspective view, with the first member 106 and the second member 118 being the main components. The device 100 is shown in a closed position, where the first member 106 is folded over the second member 118. The device 100 is shown in a perspective view, with the first member 106 and the second member 118 being the main components.

FIG. 9

FIG. 10

FIG. 1 is a perspective view of a first embodiment of a device 100, which is a container for holding a liquid. The device 100 includes a main body 102, a lid 104, and a handle 106. The lid 104 is hinged to the main body 102 and can be opened to reveal the interior of the container. The handle 106 is attached to the main body 102 and is used to hold the device 100. The device 100 is shown in an open position, with the lid 104 flipped open. The interior of the container is shown to be empty. The device 100 is made of a material that is suitable for holding liquids, such as plastic or metal. The device 100 is shown in a perspective view, which allows for a clear view of its three-dimensional shape and the various components that make up the device. The reference numerals 100, 102, 104, and 106 are used to identify the device and its various parts. The device 100 is a simple and effective design that is easy to use and clean. It is suitable for use in a variety of settings, including in the home, in the office, and in the laboratory. The device 100 is a valuable tool for anyone who needs to hold and transport liquids.
